**No printing required with Ink Editor**

When we need to edit something, most of us don’t go to a keyboard... we grab a pen and paper to figure things out. It’s just the way we think. But then we have to make all of those same changes in Word.

No longer! With Ink Editor, it’s easy to use your digital pen to intuitively make edits directly in Word. Strikethrough words to delete them, circle text to select it, and automatically snap highlighter ink to text.

It works just like you’d expect, letting you think creatively and work productively all in one step.

*Real-world scenarios:*
- Make edits on the go
- Skip the step of converting annotated feedback to document edits
- Use your pen as a primary interaction method
- Think creatively and work productively at the same time
A step-by-step guide to demo Ink Editor

**Step 1**
Tap **Draw** and then **Ink Editor**.

**Step 2**
Circle the title to select it. Then, change the font size and color.

**Step 3**
Scribble through a paragraph to delete it. Note that the page refloows automatically.

**Step 4**
Choose a highlighter color and draw a line through a sentence to see the highlight snap to the text.

**Step 5**
Choose a pen color and write a note in the margin to show the power of Inking.
